Snake Recovery System

The back up process is designed to recover games.Json file to a previous operating state, in case of a hardware or operating system failure.The recovery process will begin by starting this application and will generate a back-up files in a stable duration according to your choice ,The process will then save a recovery environment, which you can use in case your files deleted or damaged or you just want to get back to the last version . (see recovery folder)

back up time

Next Back Up :

start proccess in background

stop proccess

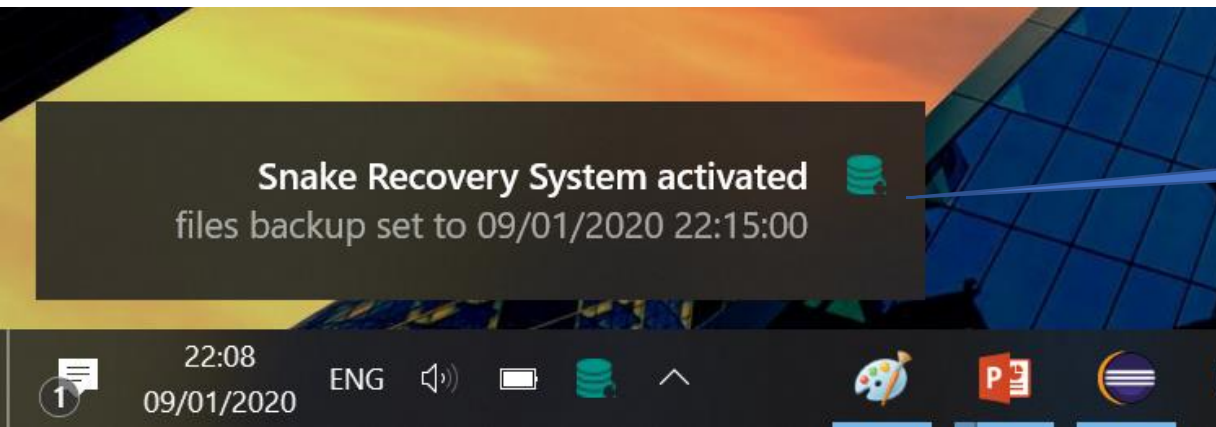

Set back
up time

Running
status

Activate
back up

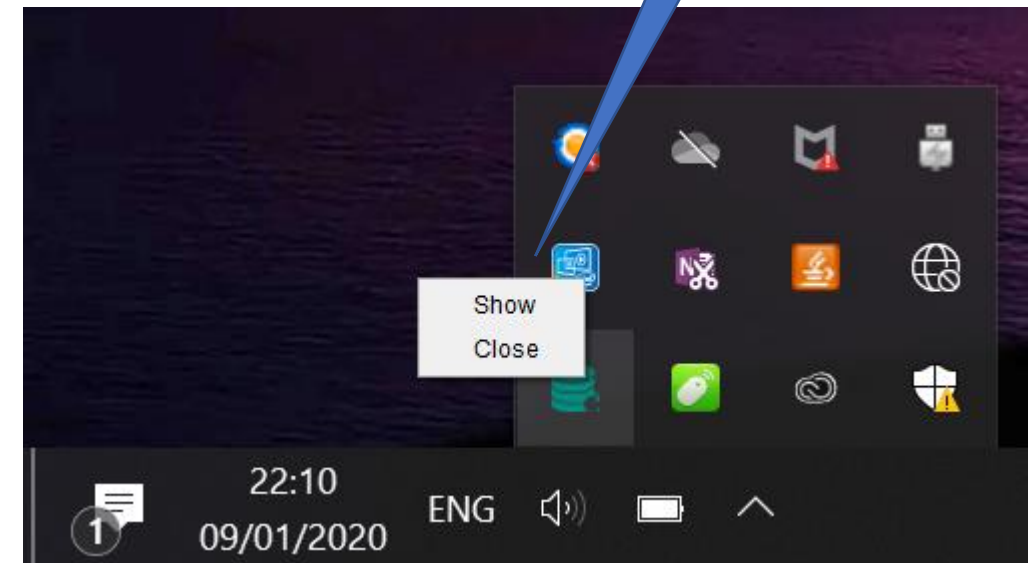

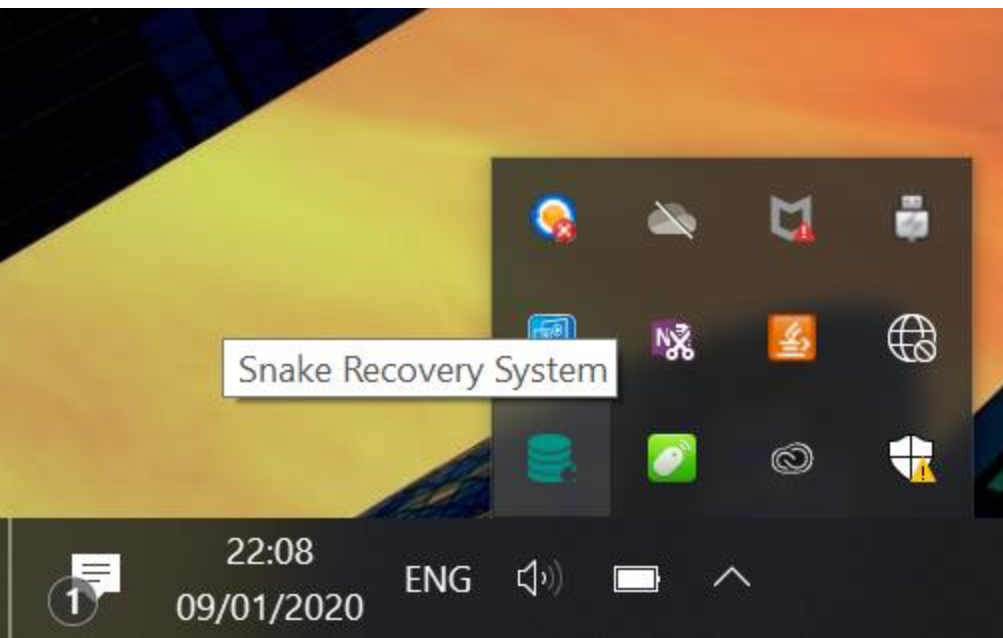

Stop
back up

Once you activated the process you can close the window , the system will continue to work on the system tray and will back up the games file according to the time you picked

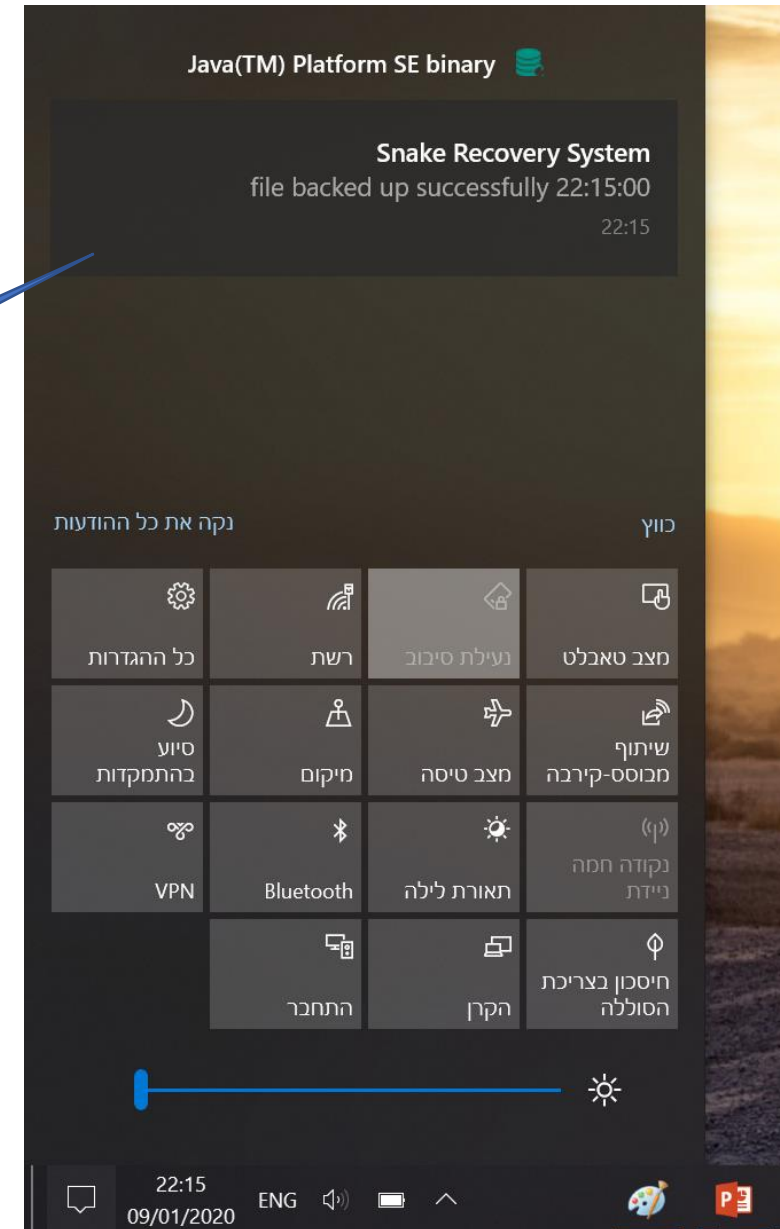

The next update

Right click to re open the system

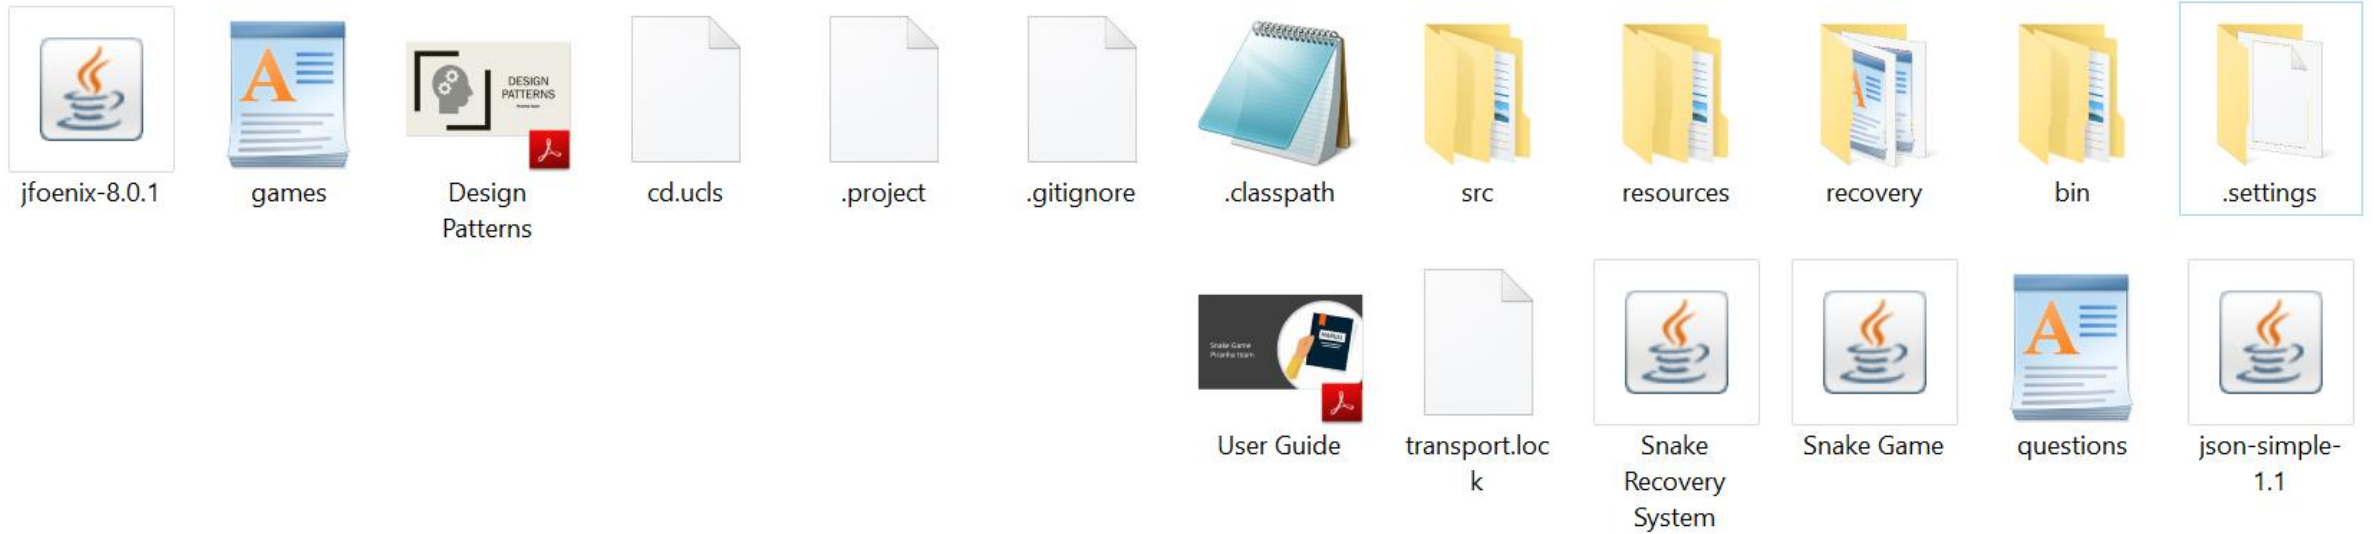

When it is the time you will receive a notification

Back up notification

Recovery folder

Here all the recovered files are stored

date

hour

- So by keeping recovery system on , your game's data is safe and backed up , even if your computer set to sleep It will run the backup minutes after computer wakes up in case you missed a back up while your computer was sleeping.
- if you forced pc shutdown you are going to need to open it again
- If you need the code that we wrote for the recovery system let us know
